MarketView®

Proprietary. Secure. Integrated.

With the MarketView Proprietary Data Hub, you can safely integrate both proprietary data and subscription data feeds within GlobalView's SaaS-based architecture to create a seamless analysis and delivery workflow for your organization.

- All requests for proprietary data are routed via proxy to the Hub. All queries for subscription data are dynamically redirected to GlobalView data centers.

- Leverage in-line and user-defined formulas to easily blend proprietary data with traditional commodity market data in all MarketView front-, middle-, and back-office products and services.

- Install the MarketView Proprietary Data Hub locally behind your firewall or in a cloud-based environment such as Amazon Web Services or Microsoft Azure. Administrators also have complete control over managing end-user permissions, with no visibility to GlobalView.

- An integrated web-service API allows administrators to bulk load proprietary data into an ODBC- compliant database such as Microsoft SQL Server or Oracle.

- Create new folders and proprietary instruments with associated metadata to be viewed in the MarketView symbol browser.

MarketView Proprietary Data Hub Key Benefits:

Blend Proprietary and Exchange Data

- Leverage user-defined formulas to perform computational analysis on both proprietary data and traditional commodity market data being sourced via the MarketView Cloud all in real-time.
- Consume proprietary data across your enterprise-wide network inside MarketView front-, mid- and back-office products and services.

Upload Proprietary Data, Create Symbols and Edit Metadata in Robust API

- Easily bulk load proprietary data via a robust web-service API.
- Create unique symbol names and their underlying metadata for expirations, currency and unit of measure.
- Edit your proprietary data symbol tree. Create additional folders and sub-folders as needed.

Manage User Permissions

- Create groups via web-service API. One group can have many users; one user can belong to many groups. Only members of the Administrator group can invoke these requests.
- Manage proprietary data permissions on a per-user and per-data basis on your own, without involving MarketView Support.
- Set up unique permission user rights for publishing, viewing and editing of proprietary data.

Control Security In-House

- Manage proprietary data on your own terms behind your own firewall, or via cloud-based solutions such as Amazon Web Services or Microsoft Azure.
- Your organization's proprietary data is separated from other data you access via MarketView by a secure firewall.
- Your organization's proprietary data and any information associated with that data, such as permissions, are not accessible to any GlobalView employees.
